

Lecture 1a

Overview

Computer and Logic Essentials

Semester 1 2020

Today

- 1 Preliminaries
- 2 How unit works
- 3 Assessment
- 4 Goals

Stepping through how
the unit works

Answering your
top questions

Who are you?

- ▶ My name is Nicole
- ▶ I am a lecturer
- ▶ See Canvas for when I am around for consultation
- ▶ My email is nronald@swin.edu.au and my office is EN506c

Who are these people next to me?

- ▶ There are around 400 students in this unit
- ▶ This unit also runs at Sarawak in both semesters, and as of 2020 at UniLink, in Subang, and in Vietnam
- ▶ First semester?
- ▶ Straight from year 12?
- ▶ Methods? Specialist?
- ▶ IT-related VCE unit? Help with IT problems? Have been self-learning?

Why am I doing this unit?

- ▶ Can you imagine life without any computing machine?
- ▶ Why do we rely on these computing machines so much? Perfect execution of instructions!
- ▶ Computer and Logic Essentials examines the logic behind computer operations

Why am I doing this unit?

- ▶ Computing is a logical process and logic is a recurring theme in the syllabus
- ▶ The challenge is in the logic, not the mathematics!
- ▶ Where to next: return to this in week 12

What is this unit about?

How do lectures work?

- ▶ They are in **ATC621** on Wednesdays from 12:30pm-2:30pm
- ▶ Generally have a 5 minute buffer at either end, plus a short break somewhere in the middle
- ▶ Slides are usually released beforehand
- ▶ Audio/slides usually recorded but **do not rely on Echo**
- ▶ Come prepared with note-taking implements (within reason)
- ▶ Do not disturb others and minimise distractions

How do tutorials work?

- ▶ Set of problems released the week before, relating to the lecture
- ▶ Read the sheet before your tutorial
- ▶ Come to the tutorial prepared to participate (e.g., bring pens, paper, devices) and have the tutorial sheet handy
- ▶ If you are unwell, or not in the mood, or something else comes up, then do not panic
- ▶ Suggested solutions will be released after the last class for the week, so you have time to work on problems over the weekend.

Who is my tutor going to be?

- | | |
|-----------------------|------------------|
| ▶ Tanjila Kanij | ▶ Mahbuba Afrin |
| ▶ Felip Marti | ▶ Ubaid Mehmood |
| ▶ Fatemeh Ansarizadeh | ▶ Kaberi Naznin |
| ▶ Deepa Prabhu | ▶ Jai Cornes |
| ▶ Syeda Zehra | ▶ Harindu Korala |

Anything more to say about tutorials?

- ▶ **General rule 1:** I will give tutors a list of students so they can mark a roll if they like, but this is not used for assessment.
- ▶ **General rule 2:** some tutorials are full; you can swap if you like, however tutors have been instructed to give priority to those enrolled in that particular class.
- ▶ **General rule 3:** while email addresses have been provided, please do not use them unnecessarily.

What will be on the assignments?

- ▶ Some “short answer” questions, e.g., show working
- ▶ See unit outline/Canvas for details of weighting and topics
- ▶ Assignment 1 covers data representation
- ▶ Assignment 2 covers sets, logic, circuits and relations
- ▶ Assignment 3 covers algorithms, graphs and counting
- ▶ All are to be submitted electronically via Canvas (not ESP, not Doubtfire)

What is Canvas?

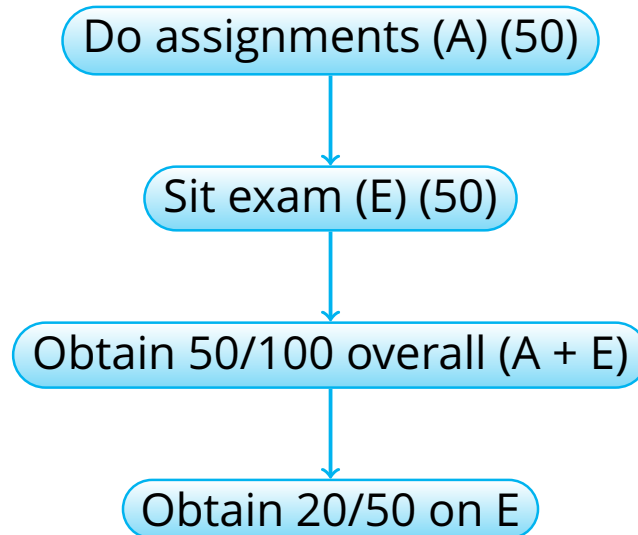

<http://swinburne.instructure.com>

What will be on the exam?

- ▶ Some “answer with no working” questions
- ▶ Some “short answer” questions, e.g., complete a table, or show working for a problem
- ▶ If tutorial exercises and assignments have been completed, there should be no surprises
- ▶ No calculators: some questions will require ability to do basic addition and division, other questions will require writing a mathematical/logical statement
- ▶ A formula sheet will be provided; you cannot bring your own.

How do I potentially pass?

Just to be clear

- ▶ Do the assignments (various weights, but add up to 50% overall)
- ▶ Sit the exam (worth 50%)
- ▶ NOTE: you must get 40% on the exam (that is, 20/50) to pass the unit (hurdle requirement) as well as an overall mark above 50/100
- ▶ If you get 45/50 on the assignments and think "I only need 5/50 on the exam to pass" then you might have to think again

How do I do well?

- ▶ Attend lectures: it has been noted in other first year units that attendance has a positive effect on final results
- ▶ Attempt tutorial questions and participate in tutorials
- ▶ Spend time outside of class working on problems, participating in discussions, reading, coding etc. (basic expectation is 10 hours/unit/week)
- ▶ Use resources: any book on discrete maths, intro to computing etc. should be useful, but try Johnsonbaugh first
- ▶ Apply ideas: no set programming language, extension tasks allow you to choose

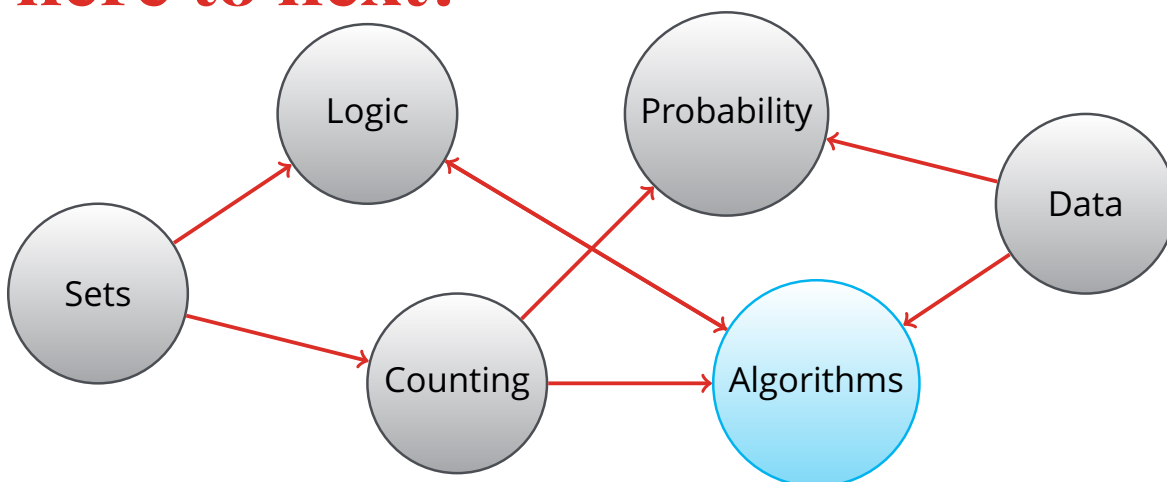

Where can I get help?

- ▶ With unit content, e.g., tutorial questions: during your tutorial, during consultation in MASH, or ask online via Studiosity
- ▶ With other difficulties related to the unit: contact the convenor
- ▶ Personal consults by appointment
- ▶ With personal difficulties:
 - ▶ Student Services: <https://www.swinburne.edu.au/current-students/student-services-support/>
 - ▶ Academic skills: <https://www.swinburne.edu.au/current-students/study-support/improve-skills/>

How can I provide feedback?

- ▶ Lecture feedback surveys in Canvas for random lectures
- ▶ Via your tutor or the lecturer
- ▶ Through the Check In Survey in week 4 and the Student Feedback Survey in weeks 10-exams
- ▶ Contact the unit moderator, Dr Tanjila Kanij (tkanij@swin.edu.au)

Where to next?

In which we discuss the big ideas behind computing and algorithmic thinking.
